Easy

1. PermMissingElem

Find the missing element in a given permutation.

Task Score	Correctness	Performance
100%	100%	100%

Task description

An array A consisting of N different integers is given. The array contains integers in the range [1..(N + 1)], which means that exactly one element is missing.

Your goal is to find that missing element.

Write a function:

```
class Solution { public int solution(int[] A); }
```

that, given an array A, returns the value of the missing element.

For example, given array A such that:

```
A[0] = 2
A[1] = 3
A[2] = 1
A[3] = 5
```

the function should return 4, as it is the missing element.

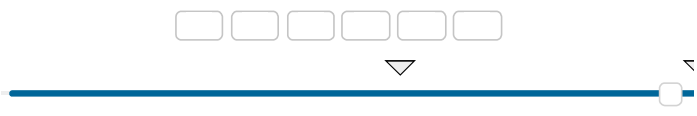
Write an **efficient** algorithm for the following assumptions:

- N is an integer within the range [0..100,000];
- the elements of A are all distinct;

Solution

Programming language used:	C#
Total time used:	1 minutes
Effective time used:	1 minutes
Notes:	*not defined yet*

Task timeline



20:03:17 20:04:01

Code: 20:04:01 UTC, cs, final, score: **100** show code in pop-up

- each element of array A is an integer within the range [1.. (N + 1)].

```
1  using System;
2  // you can also use other imports, for example:
3   using System.Collections.Generic;
4   using System.Linq;
5
6  // you can write to stdout for debugging purposes, e.g.
7  // Console.WriteLine("this is a debug message");
8
9  class Solution {
10     public int solution(int[] A)
11         {
12             if (A == null || A.Length == 0 )
13                 return 1;
14             if (A.Length == 1)
15             {
16                 if (A[0] == 1)
17                     return 2;
18                 else
19                     return 1;
20             }
21
22             A = A.OrderBy(x => x).ToArray();
23             int ret = 0;
24             var fullArray = Enumerable.Range(1, A.Max()).To
25             if (fullArray.Length <= A.Length)
26             {
27                 if (fullArray[0] == 1)
28                     ret = fullArray[fullArray.Length - 1] +
29                 else
30                     ret = 1;
31             }else
32                 ret = fullArray.Except(A).First();
33             return ret;
34         }
35 }
```

Analysis summary

The solution obtained perfect score.

Analysis

Detected time complexity: **O(N) or O(N * log(N))**
